3 Description	Circuit Diagram
<p>The GSW550 is a high-performance four-pole single throw (4PST) normally closed Depletion-Mode isolation switch. The Depletion Mode technology allows the device to conduct signals when there is no V_{CC} available and to isolate the signals when V_{CC} is present.</p> <p>The GSW550 operates on a wide V_{CC} range for design flexibility. Additionally, select pins allow the internal oscillator frequency to be adjusted between 500 kHz and 750 kHz in 75 kHz steps when V_{CC} is present. This feature is used to shift the electromagnetic interference (EMI) signature to meet customer specifications.</p>	 <p>The circuit diagram shows the GSW550 switch connected to a power supply and two speakers. The power supply consists of a VCC source and a GND connection. A Noise Canceling IC is connected to the VCC and GND lines. The GSW550 switch has four input pins: L_SPKR, R_SPKR, and two GND pins. The switch is controlled by a Control IC, which is also connected to the VCC and GND lines. The output of the switch is connected to two speakers: Left Speaker and Right Speaker.</p>

V _{IN}	Input Voltage (Select Pins)	0	V _{CC}	
V _{SW(ON)}	DC Switch I/O Voltage (Switch Conducting)	-5	+5	
V _{SW(OFF)}	DC Switch I/O Voltage (Switch Isolated)	-1.8	+3.0	
I _{IK}	DC Input Diode Current	-50		mA
I _{SW}	Switch I/O Current		350	
I _{SWPEAK}	Peak Switch Current		500	
T _A	Absolute Maximum Operating Temperature	-40	+85	°C
T _{STG}	Storage Temperature	-65	+150	°C

(1) Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

(3) When a switch is isolated (OFF), V_{SW} value must be < V_{CC};

6.2 ESD Ratings

ESD		Value	Unit
V(ESD)	Electrostatic Discharge	Human-Body Model (HBM)	5K
		Charged-Device Model (CDM)	2K

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted)

Symbol	Parameter		Min	Max	Unit
