

GTV721 GTV722 GTV724

Low-Voltage, Low-Power, Rail-to-Rail I/O CMOS Op Amps

1 Features	2 Application
- High gain bandwidth: 13 MHz - Rail-to-rail input and output - Low supply current: 635 μA/amplifier at 5 V - Input voltage range: -0.1 V to +5.6 V with $V_S=5.5$ V - Supply range: +2.2 V to +5.5 V - Operation temperature range: -40°C to +125°C	- Sensors - Photodiode amplification - Active filters - Test equipment - Driving A/D converters

3 Description	Circuit Diagram
The GTV72X families of products are low-voltage low-power operational amplifiers that can be designed into a wide range of applications. The GTV72X have a unity-gain bandwidth of 13MHz, a slew rate of 6.5V/μs, and a quiescent current of 700μA/amplifier at 5V. The GTV72X families of products are designed to provide optimal performance in low-voltage systems. They provide rail-to-rail output swing into heavy loads. The input common-mode voltage range includes ground, and the maximum input offset voltage are 3.5mV (over recommended temperature range) for the devices. Their capacitive load capability is also good at low supply voltages. The operating range is from 2.2V to 5.5V.	

4 Revision History

Revision	Date	Note
Rev. A1. 0	2023. 05. 22	Original Version
Rev. A1. 1	2023. 12. 15	1.Updatde Package Qty 2.Added Tape and Reel Information
Rev. A1. 2	2023. 12. 26	1.Added Marking 2.Added MSL
Rev. A1. 3	2024. 04. 10	1.Updated Device Summary, Pin and Packages

The latest datasheet version should be checked on the GTIC official website, as the company does not actively inform customers about updates to the datasheet.

(1) For all available packages, please contact product sales.

(2) There may be additional marking, which relates to the lot trace code information (data code and vendor code), the logo or the environmental category on the device.

(3) MSL, The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications.

(4) "XXXXXX" in Marking will be appeared as the batch code.

6 Voltage, Temperature, ESD and Thermal Ratings

6.1 Absolute Maximum Ratings

Parameters	Min.	Max.	Unit
Supply Voltage $V_S=(V^+)-(V^-)$		6.5	V
Select Input Voltage	$(V^-)-0.5$	$(V^+)+0.5$	V
Maximum Junction Temperature	-55	150	°C
Storage Temperature Range	-55	150	°C

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

(2) Input terminals are diode-clamped to the power-supply rails. Input signals that can swing more than 0.3V beyond the supply rails should be current-limited to 10mA or less.

6.2 ESD Ratings

ESD			Value	Unit
V(ESD)	Electrostatic discharge	Human-body model (HBM)	7.5 K	V
		Charged-device model (CDM)	2 K	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted)

Symbol	Parameters	Min.	Max.	Unit
Supply voltage, $V_{CC}=(V^+)-(V^-)$	Single-supply	2.2	5.5	V
	Dual-supply	±1.1	±2.75	
TA	Operating temperature	-40	125	°C

6.4 Thermal Information

Package Type	θ_{JA}	θ_{JC}	Unit
SC70-5	400	150	°C/W
SOT23-5	250	81	°C/W
MSOP8	210	45	°C/W
SOP8	158	43	°C/W
TSSOP14	180	35	°C/W
SOP14(SOIC-14)	120	36	°C/W

7 Electrical Specifications

$V_{CC}=5.0V$, $V_{CM}=V_{CC}/2$, and $R_L=10K\Omega$, FULL= $-40^{\circ}C$ to $+125^{\circ}C$, Typical values are at $T_A=+25^{\circ}C$. (unless otherwise noted)

9 Detailed Description

The GTV72X families of products are rail-to-rail operational amplifiers that can be run from a single-supply voltage 2.2V to 5.5V ($\pm 1.1\text{V}$ to $\pm 2.75\text{V}$). Supply voltages higher than 6.5V (absolute maximum) can permanently damage the amplifier. Rail-to-rail input and output swing significantly increases dynamic range, especially in low-supply applications.

Attention to good layout practices is always recommended. Keep traces short. When possible, use a PCB ground plane with surface-mount components placed as close to the device pins as possible. Place a 0.1 μF capacitor closely across the supply pins. These guidelines should be applied throughout the analog circuit to improve performance and provide benefits such as reducing the EMI susceptibility.

10 Application Note

Fig.10-1. 25-kHz Low-pass Filter

Low-pass filters are commonly employed in signal processing applications to reduce noise and prevent aliasing. The GTV72X devices are ideally suited to construct high-speed, high-precision active filters. Fig.10-1 shows a second-order, low-pass filter commonly encountered in signal processing applications.

Use the following parameters for this design example:

- Gain = 5V/V (inverting gain)
- Low-pass cutoff frequency = 25kHz
- Second-order Chebyshev filter response with 3-dB gain peaking in the passband
